Carbon Analyst (Entry Level)

Introduction

In the carbon constrained world of today, there is an ever increasing awareness of the effects of climate change caused by greenhouse gas emissions. More and more organisations therefore feel the need to get in full control of their carbon performance. Instead of a wait and see approach, it can be of strategic competitive value to plan ahead of new environmental policies and to respond to the developing susceptibility of clients towards the environmental impact of your companies' products and services in an early stage.

EcoMetrix Africa is a leading South African company assisting organisations in managing carbon emissions and developing emission reduction projects to offset emissions. Moreover, our team has an unmatched track record in taking emission reduction projects through the process of the Clean Development Mechanism of the UNFCCC in order to qualify for carbon credits which can substantially improve project economics.

EcoMetrix Africa also assists organisations in the whole process of carbon management, from starting with a first carbon footprint up to developing and implementing a carbon management strategy.

Job Details

- Job Title: Carbon Analyst
- Job Type: Contract (6 month duration with opportunity for renewal)
- Location: Johannesburg, South Africa
- Reports to: Managing Director
